cont

sub 24. (NEW) The system interface recited in claim 1 wherein the messaging network comprises a switch network having a plurality of ports, each one of the ports being coupled to a corresponding one of the plurality of first and second directors.

25. (NEW) A system interface comprising:

- a plurality of first directors;
- a plurality of second directors;
- a data transfer section having a cache memory, such cache memory being coupled to the plurality of first and second directors;
- a messaging network comprising a switch network having a plurality of ports, each one of the ports being coupled to a corresponding one of the plurality of first directors and second directors, such message network being operative independently of the data transfer section; and
- wherein the first and second directors control data transfer between the first directors and the second directors in response to messages passing between the first directors and the second directors through the messaging network to facilitate data transfer between first directors and the second directors with such data passing through the cache memory in the data transfer section.

26. (NEW) A system interface comprising:
